JOB TITLE:

General Operations Manager

JOB SUMMARY:

Come grow with us! This new position will be an important part of helping the existing executive team develop and implement strategies to take us to the next level in our high purity process equipment facility. The successful candidate will have the skills to:

- Plan and control manufacturing operations at lowest cost consistent with established specifications
- Recommend and implement methods and policies ensuring most efficient and economical purchasing, movement, and storage of materials.
- Direct purchasing, production planning, inventory and warehouse stock control, shipping and warehousing.
- Serve as an active member of the executive team

Other responsibilities include:

- Develop and implement the goals and objectives of production, production planning/scheduling, and supply chain / materials.
- Provide leadership in the supply chain functions of production planning, materials forecasting, receiving and raw materials, production scheduling and commodity planning
- Manage all systems relating to inventory levels
- Oversee production control planning and scheduling
- Maintain efficient warehouse operations
- Manage entire process for materials and finished goods
- Participate in selection and implementation of a modern ERP solution
- Coordinate purchasing policies and secure competitive pricing
- Develop a consistent and reliable supplier base, including international sourcing
- Develop metrics to measure effectiveness of forecasts, seasonality profiling, execution of the plans/schedules, impact on operational effectiveness and customer service.
- Coordinate global purchasing for divisions within the company
- Conduct vendor management programs
- Interface with sales, engineering and production
- Develop capacity planning processes and implement best practices in planning and scheduling to ensure better synchronization of the flow of materials and maintaining accurate inventories
