

FIVE WAYS TO SAVE WHEN USING IBC TOTES

TrueClean®

REDUCE PRODUCT WASTE

The TrueClean® ToteTilter™ uses pressurized air to gradually raise the tote as its weight decreases — allowing the product to collect on the valve side of the container for a more thorough evacuation.

ELIMINATE SAFETY HAZARDS

With the ToteTilter, operators can safely trigger the automatic process which allows the tote to gradually rise as the product empties and the tote weight decreases. No more risky forklift maneuvers or using blocks of wood to reclaim all of your media.

REDUCE CHEMICAL & WATER WASTE

With the TrueClean ToteCleaner™, you can recirculate the cleaning chemicals and water through the system. This allows you to effectively clean the tote using less chemicals and water.

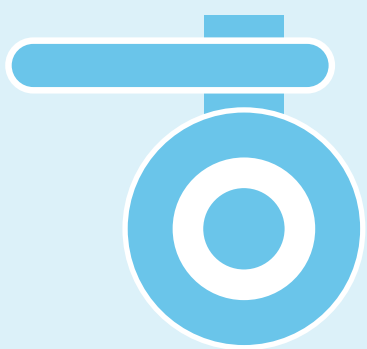

ELIMINATE CLEANING FEES

With the ToteCleaner, you can save tote supplier cleaning fees by returning a squeaky clean tote.

INCREASE PRODUCTIVITY

The TrueClean® ToteCleaner™ drastically reduces the time spent cleaning totes, allowing more time for other tasks.
